## **Y-Logimed Awarded with High Performance Distinction for Integrated Supply Chain at Transport & Logistics Awards 2014**

Y-Logimed, the Greek provider of complete distribution, logistics and storage services in the healthcare sector and a member of Hygeia Group of Companies, was honored with the High Performance Award in the category of “Integrated Supply Chain” during the ceremony of Transport & Logistics Awards 2014, which took place on Thursday, May 29 in a central hotel of Athens.

Transport & Logistics Awards is a new initiative, which distinguishes and rewards the accomplishments of the companies of the Greek Public and Private sectors, which are active in the fields of Supply Chain and Transportation, and excel in terms of best practices in this crucial sector of the National Economy. As for the selection of the winners, it was carried out according to international standards.

The event was hosted by Boussias Communications and the Supply Chain Institute, under the auspices of Ministry of Development, Competitiveness, Infrastructure, Transport and Networks, the Ministry of Shipping & Aegean Sea and the Hellenic Federation of Enterprises (H.F.E).

After taking into account the validated best practices submitted, the selection committee chose **Y-Logimed as an example of operational activity** in terms of integration of the processes of a supply chain in their entirety, aiming at streamlining, cost containment and the provision of increased added value to the customer.

Mr. Michael Spanodimos, the C.E.O. of Y-Logimed, commented: “We are really proud of receiving this award, since we are in a position to manage the entire product range of medical consumables, implants and assets, with the optimum quality, efficiency and customer service standards, all of which are ultimately provided to the final recipients of the services in question, the patients themselves. Apart from its significant commercial activity, our company is in charge of the supply chain of the Hygeia Group of Hospitals in their entirety, as well as of other collaborating clinics, each one to their own requirements and unique needs. Even in cases of lacking central warehouse facilities, we have enabled hospital operations, thanks to approximately three daily deliveries, which are carried out directly to the hospital departments, based on the items used in the previous day, thus making Hospitals operating almost on a zero stock basis”.
